

## OPERATING PROCEDURE FOR BUMPER BOATS

**Step 1)** Loading and unloading assistance for the riders should be a mandatory condition of operating the ride.

NEVER...REPEAT...NEVER allow children to get in and out of the boats by themselves.

Note: The suggested method of operating the Little Tot Bumper Boat ride is to have an attendant(s) standing in the water. The attendant picks up the child and places them into the boat.

When the ride is over the attendant once again picks up the child and places them on the outside of the pool.

**Step 2)** Before starting the ride it is important to review the Rules of Safe Operation with the child.

**Step 3)** Once the rider(s) have been properly instructed and are familiar with the boat's operation the attendant can start the pump by switching the ON/OFF switch to "ON".

Note: The "ON/OFF" switch is located on the backside of the seat.

NEVER ALLOW THE RIDER TO START THE BOAT.

THE RIDE MUST BE STARTED BY THE ATTENDANT ONLY.

**Step 4)** When the ride cycle is complete the attendant should turn the "ON/OFF" switch to the "OFF" position.

Note: When the "ride cycle" is complete and the attendant has stopped the boat, the child should be picked up by the attendant and placed on the outside of the pool.

CAUTION: NEVER...REPEAT...NEVER allow the child (rider) to stop the boat and get out of the boat by themselves.

IMPORTANT: Ride attendant(s) must always be present while the ride is accessible to the public. Full time supervision is mandatory to assure that the ride is operated in a safe environment.
